Three quarters of the world is covered by water. And SEAHAWK.

Powered by twin 1,700 shp T700-GE-401C turboshafts and cleared to 21,885 lb gross weight, SEAHAWK deploys quickly from carriers, cruisers, destroyers, frigates. Ranging up

to 100 nm from its mother ship. Expanding the range of radar and sonar to well over the visual horizon. Then, with its breakthrough Recovery Assist, Secure and Transversing system, returning safely to the flight deck. Under even the toughest conditions. From darkest night. To Sea State Five.

SEAHAWK and its derivatives serve the U.S. Navy and Coast Guard. As well as navies around the world. Spain. Australia. Japan. Taiwan. Greece. Thailand. Performing magnificently in an array of seaborne operations.

Submarine hunting. Missile targeting. Anti-surface ship warfare. Strike warfare. Search and rescue. VIP transport.

Whatever the naval mission, this is the helicopter for the job.
